

## **CRISTIAN ROMANEC**

### **NEW CLINICAL AND PARA CLINICAL APPROACH FOR ORTHODONTIC AND SURGICAL DIAGNOSIS**

Clinical studies for better treatment and comprehensive diagnosis are becoming part of current practice of orthodontists in our country and the need for guidelines to enhance the standard of care, becomes more required. The aim of this paper is to bring into attention the necessity and to understand the importance of para clinical and clinical investigations available. Healthcare providers should have possibility and instruments, like guidelines to answer specific questions in day-to-day practice and as an information source for continuing professional education.
